

Pre-class assignment #15

PHY-905-003
Computational Astrophysics and Astrostatistics
Spring 2026

This assignment is due the evening of Monday March 9, 2026. Turn in all materials via GitHub Classroom.

Reading/videos:

1. Read this article on the [basics of the CPU](#). Note that there are multiple pages in this article!
2. Watch [this video](#) on data structures. This video is not specific to Python. The first roughly 6 minutes are the most relevant for our next class, but you may find all of it interesting and informative.
3. Read the accompanying PDF on Lists and Tuples to understand how these data structures function under the hood.
4. ****Optional, but highly recommended:**** Read the [Beginner's Guide to Numpy](#)

Your assignment: After you read the information and watch the video above, summarize the key points from them and put any questions that you might have in the accompanying `ANSWERS.md` file

Handing it in: Include your summary and questions in `ANSWERS.md` and commit it!
